AEM TASK – 8

MSM, Blueprint, Live Copy, and Rollout

• **MSM (Multi-Site Manager):** AEM's MSM capability simplifies managing multiple websites by linking similar content across various regions or versions.

• **Blueprint:** Acts as the original template or master page/site that serves as the foundation for live copies. Edits in the blueprint can be pushed to live copies.

• **Live Copy:** A replicated version of the blueprint that maintains inheritance. Content and layout are synced from the blueprint and can be updated through rollouts.

• **Rollout:** The method used to apply and synchronize changes from a blueprint to its live copies.

Language Copy
 A language copy is a translated duplicate of a site, created in another language for international audiences. Unlike live copies, these do not retain a link with the original content, so updates in the source will not affect them.

Creating a Site Using MSM with us/en as the Source
 Steps to Create an MSM-Based Site

1. **Defined the Blueprint Site:** Created the core layout and structure which would serve as the base for live copies.

2. **Created a Live Copy:** Produced a linked copy of the blueprint at a new location to replicate the content consistently.

3. **Executed Rollout:** Applied changes from the blueprint to the live copy to keep both in sync.

Creating the McDonald's 'About Our Food' Page in AEM
 **Steps to Author the Page in AEM**

1. **Built a Page:** Used AEM's interface to establish the page framework.

2. **Inserted Components:** Added relevant elements like images, text blocks, and buttons to match the reference design.

3. **Published the Page:** Activated the page to make it visible and usable within AEM.
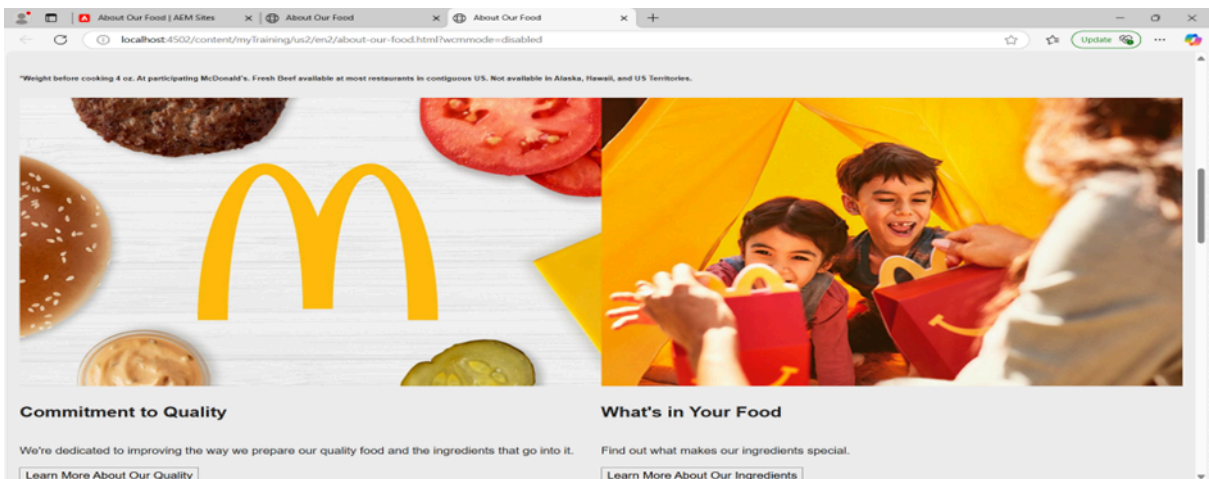

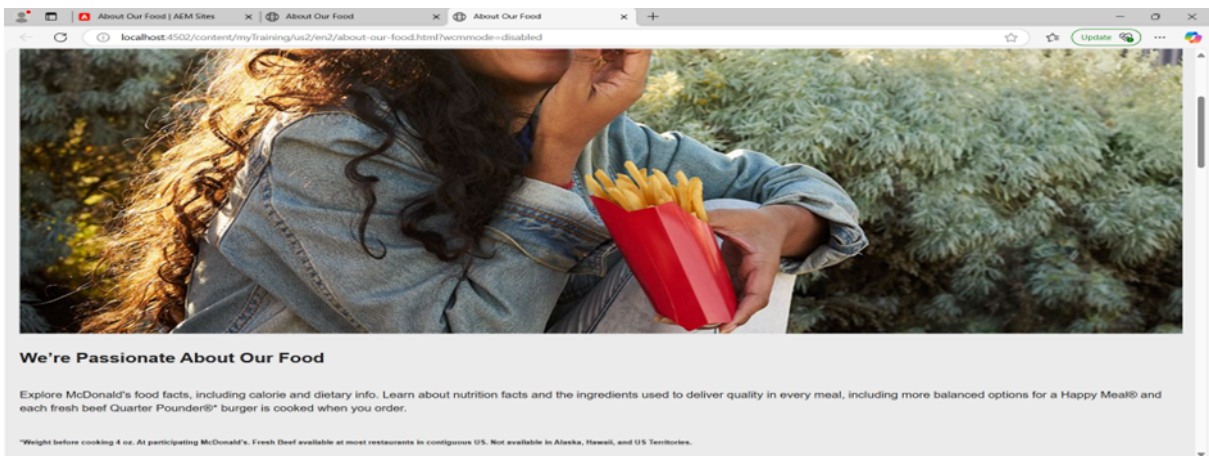

Setting Up AEM Dispatcher Locally

1. **Prepared Prerequisites:** Verified required tools and configurations were in place before beginning the setup.

2. **Obtained Dispatcher Module:** Downloaded and set up the dispatcher module to work with the Apache server.

3. **Modified Configurations:** Adjusted settings to ensure all traffic routes correctly through the dispatcher.

4. **Completed Setup:** Restarted services and performed tests to confirm everything was functioning as expected.

Screen shots
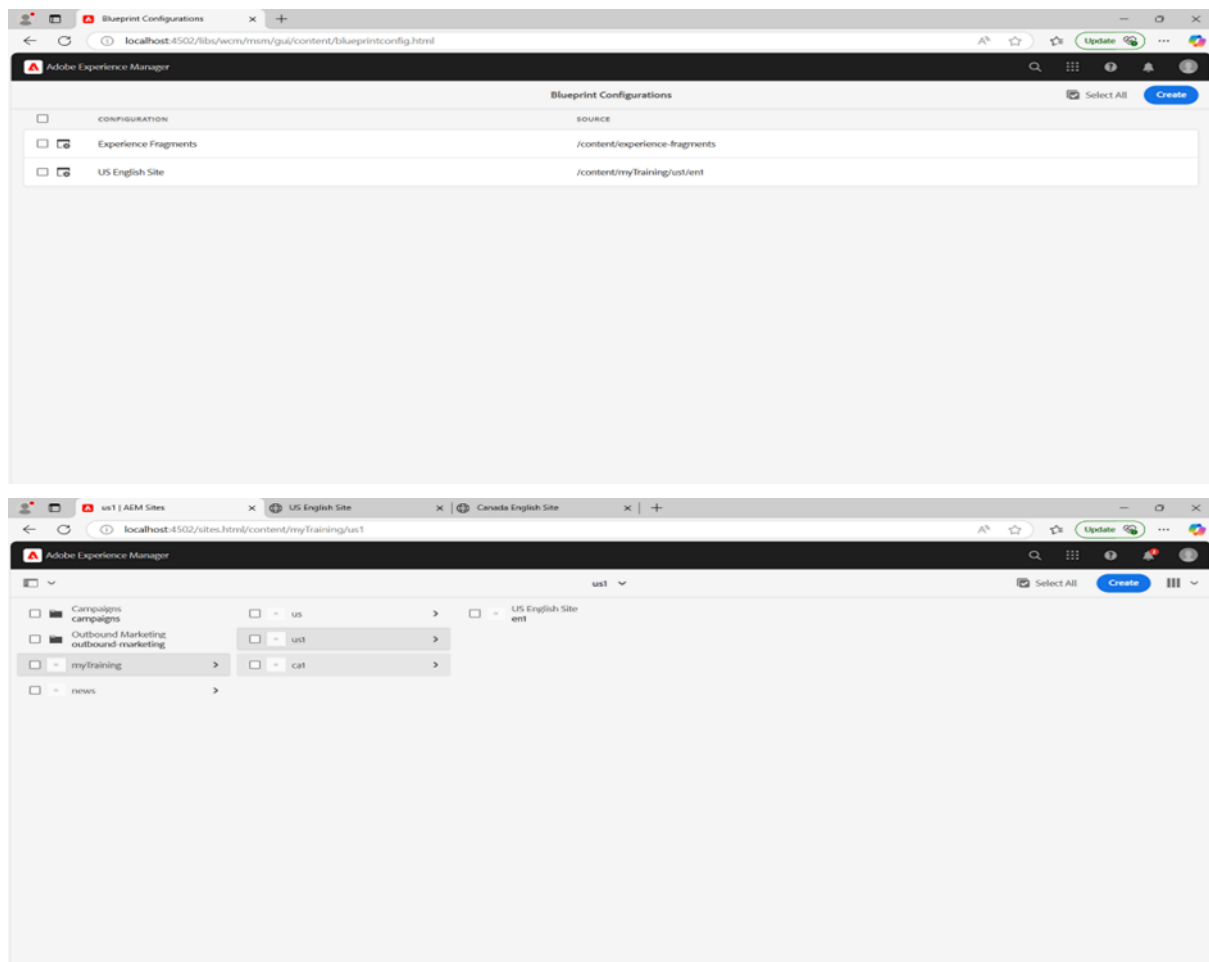

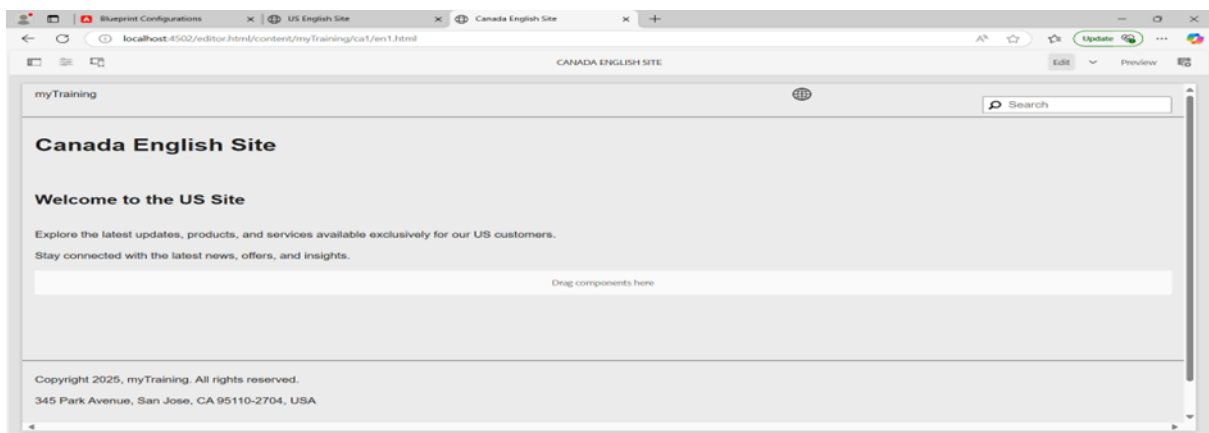

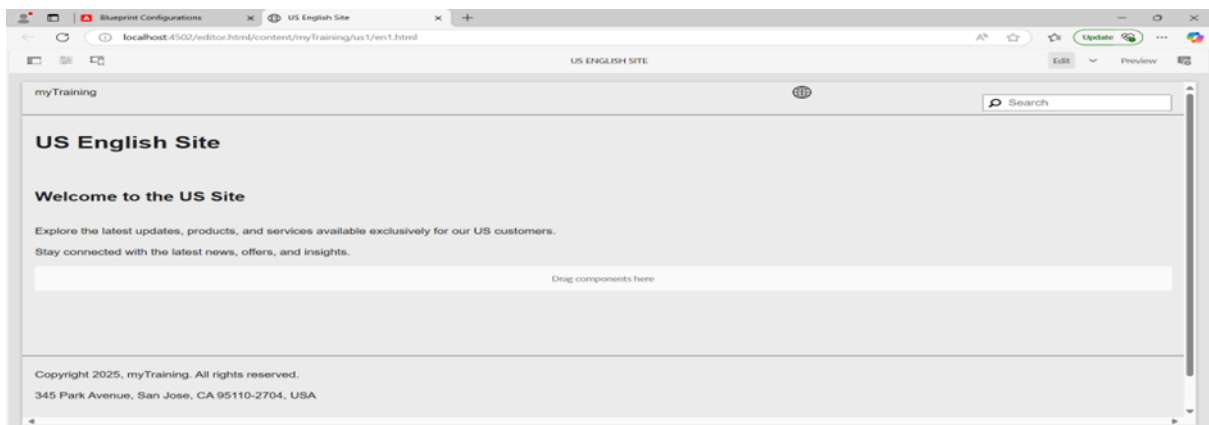

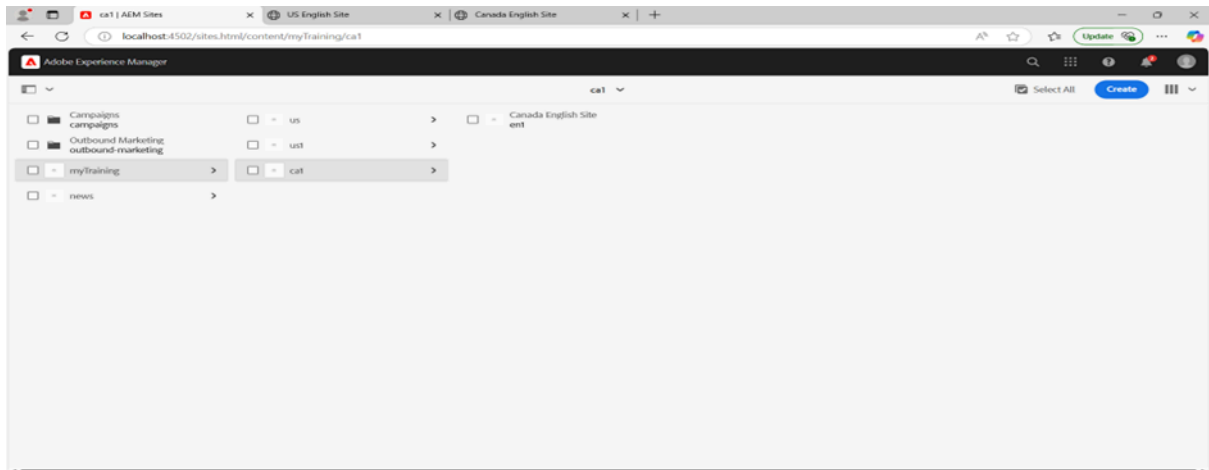

Create this page https://www.mcdonalds.com/us/en-us/about-our-food.html and author the page using components(using the content/images from the above page).
